

## “HOW TO MEASURE TEXAS LONGHORNS”

I \_\_\_\_\_ verify that I have watched the  
(Please Print Your Name)

TLBAA How to Measure Texas Longhorns video. By signing this form, I understand the proper way to measure Tip-to-Tip, Total Horn, Composite and Twist.

### Measuring Methods:

**NOTE: All measurements for Horn Showcase entries should be measured to the 1/16 of an inch.**

- 1. Tip-to-Tip (TTT):** The distance between the outside tips of the horns will be measured.
- 2. Total Horn (TH):** The distance from the tip of one horn down along the outside of the horn, then the backside of the horn while keeping contact with the skull as it runs the backside of poll and up the other horn in the same manner to the tip.
- 3. Composite Measurement (COMP):** Composite measurement consists of adding TTT, TH, and both bases (as close to the head as possible under the hair line.) This total number of all four measurements will give you the composite measurement.
- 4. Twist Measurement:** The twist horn measurement will start at one horn tip following the line of the horn as it follows the twist in the horn (wrapping around horn), across the top or backside of the poll and up the other horn in same method. \* No Tip-to-Tip or bases in this measurement.
